

**PROGRAM AND METHOD OF PRINT INSTRUCTION FOR PRINTER
WITH PDF DIRECT PRINTING FUNCTION**

ABSTRACT

A print instruction program and method for allowing a network terminal device to send print instructions to a PDF direct-printing printer in a communications network in an efficient and advantageous manner. The program and method includes the capability to obtain PDF file name and network address data from the location of a mouse pointer in a web browser screen. The file name and address data can be stored locally on the network terminal device, preferably in a list format. The program and method also provides for the display and operation of a direct print menu in association with a click on a control button of the mouse. The program and method allows the PDF file name and address data to be sent to the network-attached printer, either singly or as part of a list and either as a network address or as an actual file.
